The presentation describes the “intervention procedures” that were defined and shared in the frame of the participatory workshops conducted during the project. These “intervention procedures” contain the general procedures and guidelines developed on the basis of management and monitoring protocol. The inherent issues are then identified and analyzed. Furthermore, the presentation reports a synthesis about the evolution of the Regulation of the Umbria regional regulation, concerning the road kill issue since 1986. Finally, we highlight the benefits obtained from the results of the LIFE STRADE Project, analyzing the development of compensation procedures and the impact on the law.
